We introduce the eight-factor asset pricing model as an extension of the Fama and French (2016b) five-factor model. In addition to capturing market premium, size, value, profitability and investment pricing factors, we propose three additional factors that represent momentum, liquidity and default risk.

Multi-factor asset pricing models: Factor construction

A five-factor model directed at capturing the size, value, profitability, and investment patterns in average stock returns performs better than the three-factor model of Fama and French (). The five-factor model's main problem is its failure to capture the low average returns on small stocks whose returns behave like those of firms that invest a lot despite low profitability.
