A fishing lure is a type of artificial fishing bait which is designed to attract a fish's attention. The lure uses movement, vibration, flash and color to bait fish. Many lures are equipped with one or more hooks that are used to catch fish when they strike the lure. Some lures are placed to attract fish so a spear can be impaled into the fish or so the fish can be captured by hand.

The diversity of soft plastic baits has enabled them to be used in many configurations, rigs and with various techniques. The original, and still most commonly seen use of soft plastics is as a simple lure, using a weighted hook known as a jighead. The hook of the jighead is threaded through the lure so that only the gape of the hook, and the eye, are exposed.
